Key Performance Indicators

Project KPIs | Targets and Measurement Methods

1 Project Progress & Deliverables

KPI	Description	Target	How to Measure
On-Time Delivery	Submitting deliverables before the deadline.	**100% of deliverables submitted at least 1 day before the deadline.**	GitHub Project
Weekly Task Completion	Percentage of planned tasks completed each week.	**At least 80% of the week's planned tasks completed.**	GitHub Project
Deliverable Completeness	Ensuring every deliverable contains all required parts specified in the project guide.	**0 missing parts.**	Checklist based on the documentation guide

2 System Performance & Response Time

KPI	Description	Target	How to Measure
Page Load Time	Time required to fully load a page, measured on the system's main pages.	**< 3 seconds (average across main pages)**	Browser DevTools (Network tab) on a fixed network speed
Server Response Time	Time required for the server to respond to a request.	**< 500 ms for 95% of requests**	Browser DevTools (Network tab)
Error Rate	Percentage of requests that fail with a server error (HTTP 5xx), calculated weekly.	**< 1% of requests per week**	Server logs

3 Emergency Handling & Coordination

KPI	Description	Target	How to Measure
Family Notification Delivery	Percentage of emergency notifications actually delivered to the patient's family (not just sent).	**100% of notifications delivered**	Notifications table in the database (delivery status and delivered-at fields)
Emergency Request Delivery	Time from pressing the emergency button until the request is received by the Emergency Center.	**< 3 seconds**	Server-side timestamps stored in the database (button press and receipt time)
Hospital Pre-Arrival Information	Hospital receives the patient's emergency information before the ambulance arrives.	**100% of test cases**	Test cases covering defined emergency scenarios
Mobile Support	Percentage of pages that work properly on mobile screens.	**100% of pages**	Manual testing on Android and iOS devices and common screen sizes
